

### Features

- · Constant Current mode output
- · Metal housing with Class I design
- · Built-in active PFC function
- Environment-adaptive driving capability
- IP67 / IP65 design for indoor or outdoor installations
- Function options: output adjustable via potentiometer;
   3 in 1 dimming (dim-to-off,isolated design); Smart timer dimming; Low temperature light-on; Junction box
- Typical lifetime>62000 hours (Note.7)
- 7 years warranty

# Applications

- · LED Harbour
- · LED greenhouse lighting
- · LED statium lighting
- LED mining lighting
- Type "HL" for use in Class I , Division 2 hazardous(Classified) location

# Description

HLG-480H-C series is a 480W LED AC/DC driver featuring the constant current mode and high voltage output. HLG-480H-C operates from  $90\sim305$ VAC and offers models with different rated current ranging between 1400mA and 3500mA. Thanks to the high efficiency up to 95%, with the fanless design, the entire series is able to operate for -40°C  $\sim$  +90°C case temperature under free air convection. The design of metal housing and IP67/IP65 ingress protection level allows this series to fit both indoor and outdoor applications. Moreover, the innovative environment-adaptive capability allows this series to reliably light on the LEDs for all kinds of application environments in almost any spots that may install LED luminaires in the world. HLG-480H-C is equipped with various function options, such as dimming methodologies, so as to provide the optimal design flexibility for LED lighting system.

## Model Encoding

| Type | IP Level | Function   | Note       |
|------|----------|--|------------|
| Α    | IP65     | Io adjustable through built-in potentiometer. And environment adaptiveness.                    | In Stock   |
| В    | IP67     | 3 in 1 dimming function (0~10Vdc, 10V PWM signal and resistance) and environment adaptiveness. | In Stock   |
| Dx   | IP67     | Built-in Smart timer dimming function by user request. And environment adaptiveness.           | By request |
| D2   | IP67     | Built-in Smart timer dimming and programmable function. And environment adaptiveness.          | In Stock   |

| NOTE        | <ol> <li>All parameters NOT specially mentioned are measured at 230VAC input, rated current and 25°C of ambient temperature.</li> <li>Please refer to "DRIVING METHODS OF LED MODULE".</li> <li>De-rating may be needed under low input voltages. Please refer to "STATIC CHARACTERISTIC" sections for details.</li> <li>Length of set up time is measured at first cold start. Turning ON/OFF the power supply may lead to increase of the set up time.</li> <li>The driver is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.</li> <li>To fulfill requirements of the latest ErP regulation for lighting fixtures, this LED driver can only be used behind a switch without permanently connected to the mains.</li> <li>This series meets the typical life expectancy of &gt;62,000 hours of operation when Tcase, particularly (to point (or TMP, per DLC), is about 75°C or less</li> <li>Please refer to the warranty statement on MEAN WELL's website at http://www.meanwell.com</li> </ol> |  |   |                                     |                |                    |  |  |

PFC fosc : 45KHz PWM fosc : 55KHz

### ■ DRIVING METHODS OF LED MODULE

 $\frak{\%}$  This series works in constant current mode to directly drive the LEDs.

Typical LED driver I-V curve

In the constant current region, the highest voltage at the output of the driver depends on the configuration of the end systems.

Should there be any compatibility issues, please contact MEAN WELL.

MEAN WELL Environment Adaptive Function allows the driver to detect and automatically adjust the output up to 120% Vo with 80% lo and turns into the desired Constant Current area after the luminaire reaches steady state operation.

Should there be any questions, please contact MEAN WELL.

- · Output constant current level can be adjusted by applying one of the three methodologies between DIM+ and DIM-: 0 ~ 10VDC, or 10V PWM signal or resistance.
- Direct connecting to LEDs is suggested. It is not suitable to be used with additional drivers.
- Dimming source current from power supply: 100µA (typ.)
- O Applying additive 0 ~ 10VDC

"DO NOT connect "DIM- to Vo-"

O Applying additive 10V PWM signal (frequency range 100Hz ~ 3KHz):

"DO NOT connect "DIM- to Vo-"

O Applying additive resistance:

"DO NOT connect "DIM- to Vo-"

Note: 1. Min. dimming level is about 6% and the output current is not defined when 0% < Iout < 6%.

2. The output current could drop down to 0% when dimming input is about 0kΩ or 0Vdc, or 10V PWM signal with 0% duty cycle.

### Smart timer dimming function (for Dxx-Type by User definition)

MEAN WELL Smart timer dimming primarily provides the adaptive proportion dimming profile for the output constant current level to perform up to 14 consecutive hours. 3 dimming profiles hereunder are defined accounting for the most frequently seen applications. If other options may be needed, please contact MEAN WELL for details.

Ex: OD01-Type: the profile recommended for residential lighting

Set up for D01-Type in Smart timer dimming software program:

|         | T1    | T2    | Т3    | T4  |
|---------|-------|-------|-------|-----|
| TIME**  | 06:00 | 07:00 | 11:00 |     |
| LEVEL** | 100%  | 70%   | 50%   | 70% |

Operating Time(HH:MM)

- \*\*: TIME matches Operating Time in the diagram whereas LEVEL matches Dimming Level.
  - Example: If a residential lighting application adopts D01-Type, when turning on the power supply at 6:00pm, for instance:
- [1] The power supply will switch to the constant current level at 100% starting from 6:00pm.
- [2] The power supply will switch to the constant current level at 70% in turn, starting from 0:00am, which is 06:00 after the power supply turns on.
- [3] The power supply will switch to the constant current level at 50% in turn, starting from 1:00am, which is 07:00 after the power supply turns on.
- [4] The power supply will switch to the constant current level at 70% in turn, starting from 5:00am, which is 11:00 after the power supply turns on.

  The constant current level remains till 8:00am, which is 14:00 after the power supply turns on.

### Ex: $\bigcirc$ D02-Type: the profile recommended for street lighting

Set up for D02-Type in Smart timer dimming software program:

|         | T1    | T2    | Т3   | T4    | T5  |
|---------|-------|-------|------|-------|-----|
| TIME**  | 01:00 | 03:00 | 8:00 | 11:00 |     |
| LEVEL** | 50%   | 80%   | 100% | 60%   | 80% |

\*\*: TIME matches Operating Time in the diagram whereas LEVEL matches Dimming Level.

Example: If a street lighting application adopts D02-Type, when turning on the power supply at 5:00pm, for instance:

- [1] The power supply will switch to the constant current level at 50% starting from 5:00pm.
- [2] The power supply will switch to the constant current level at 80% in turn, starting from 6:00pm, which is 01:00 after the power supply turns on.
- [3] The power supply will switch to the constant current level at 100% in turn, starting from 8:00pm, which is 03:00 after the power supply turns on.
- [4] The power supply will switch to the constant current level at 60% in turn, starting from 1:00am, which is 08:00 after the power supply turns on.
- [5] The power supply will switch to the constant current level at 80% in turn, starting from 4:00am, which is 11:00 after the power supply turns on. The constant current level remains till 6:30am, which is 14:00 after the power supply turns on.

Ex: O D03-Type: the profile recommended for tunnel lighting

Set up for D03-Type in Smart timer dimming software program:

|         | T1    | T2    | Т3  |
|---------|-------|-------|-----|
| TIME**  | 01:30 | 11:00 |     |
| LEVEL** | 70%   | 100%  | 70% |

 $\textbf{Example: If a tunnel lighting application adopts D03-Type, when turning on the power supply at 4:30pm, for instance: \\$ 

- [1] The power supply will switch to the constant current level at 70% starting from 4:30pm.
- [2] The power supply will switch to the constant current level at 100% in turn, starting from 6:00pm, which is 01:30 after the power supply turns on.
- [3] The power supply will switch to the constant current level at 70% in turn, starting from 5:00 am, which is 11:00 after the power supply turns on.

The constant current level remains till 6:30am, which is 14:00 after the power supply turns on.

 $<sup>\</sup>hbox{\ensuremath{}^{**}:} {\sf TIME} \ {\sf matches} \ {\sf Operating} \ {\sf Time} \ {\sf in} \ {\sf the} \ {\sf diagram} \ {\sf whereas} \ {\sf LEVEL} \ {\sf matches} \ {\sf Dimming} \ {\sf Level}.$ 

## ■ LIFE TIME

① Junction box option is available for all types. Please contact MEAW WELL for details.
